| <b>Module Aims</b>       | The course aims at introducing the students into the world of social behaviour. In the first part of the course the social psychology of the individual is addressed; the following topics are covered: social perception, attribution, attitudes and prejudice as a specific attitude. In the second part the social psychology of the groups is examined. Types of social interactions and social influences are thoroughly explored such as relevant social phenomena like aggression and prosocial behaviour. As the course is also for health promoters, there is special emphasis on the social aspects of health behaviour (e.g. health related attitudes and their relation to health behaviour). Lifelike examples are given to help students understanding.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Module Subject</b>    | 1. The individual in the social world: introduction into social psychology, social perception, theories of perception and social perception (Asch, Kelly) impression management, schemes, stereotypes, biases in social perception. 2. Attribution: theories of attribution (Heider, Kelley, Weiner), major sources of attributional bias (fundamental attribution error, the actor-observer effect, attribution of success and failure etc.), self attribution, practical applications of attribution. 3. Attitudes: definition, functions of attitude, measuring attitudes, attitudes and behaviour (health related attitudes and their changing), prejudice as a specific attitude, forms of reducing prejudice, cognitive consistency and dissonance. 4. Groups in social psychology: definitions of a group, functions, structure and development of groups, communication within the group, method for measuring social relationships (sociometry). 5. The group and the individual: norms, forms of social influence (conformity, identification, internalisation, persuasion, obedience), leadership. 6. Prosocial behaviour and interpersonal aggression: helping and intervening, theoretical perspectives on aggression, prevention and control of aggression. |
| <b>Number of Credits</b> | 4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Termin</b>            | 2nd                                                                                                                                                                                                                                                                                                                            |
| <b>Module Aims</b>       | Children discover the rhythm and rhyme of language via nursery rhymes in a delightful manner. All children take great delight in the rhythms and melodies of songs. The emphasis on melody and rhythm also helps children learn the rhyme, increasing their vocabulary and verbal skills (even developing their motor skills). |
| <b>Module Subject</b>    | Jump Rope Rhymes, Fingerplays, Action Poems, Special Occasion Rhymes, Animal Rhymes, Counting and Number Rhymes, Songs                                                                                                                                                                                                         |

| <b>Module Aims</b>    | The aim of the course is to provide practice in various fields of language, with special focus given to Use of English. Various activities are used to increase vocabulary, to practise grammar, to promote participation during class and to enhance the students' overall knowledge of the English language.                                                   |
| <b>Module Subject</b> | The students' knowledge of the English language will be improved during this seminar. Various activities are introduced to increase vocabulary (with special attention paid to word formation, collocations, phrasal verbs, proverbs and idioms) and to practise various elements of grammar (sentence transformation exercises, error correction, cloze tests). |

| Termin                | 1st                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Module Aims</b>    | During the course the students are going to be given a brief overview of the genre of fairy tales along with its most important representatives. After examining the genre's characteristics, the focus is going to be placed upon its major practitioners (A. A. Milne, Lewis Carroll, Oscar Wilde) and some of their works will be presented for in-depth analysis. We are also going to look at the ways how fairy tales could be incorporated into teaching. |
| <b>Module Subject</b> | Students are expected to become familiar with major fairy tale writers and participate in the discussions of their works during class. They also need to take part in a micro-teaching exercise. Topics include: folk tales, fairy tales, songs and rhymes, games, riddles.                                                                                                                                                                                      |

| <b>Module Aims</b>    | This course offers an introduction to children's literature, its historical developments and its main genres. The most important representatives of the various genres will be discussed through some of the most famous works. In the analysis we are also going to consider the possible use of the works in and outside school instruction.               |

| <b>Module Aims</b>    | The course aims to give students a historical overview of the Gothic genre and trace its development from its beginnings up until its contemporary descendant, horror fiction. A wide range of texts is selected for reading to illustrate genre conventions and its distinctive features. We will look at certain themes and motifs and how these appear in the works of various authors.                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Module Subject</b> | After an introduction to Gothic fiction (the origins of the novel of terror, its characteristics and key-texts), we will follow a chronological order, examining the novels/short stories of the following authors: Mary Shelley, Nathaniel Hawthorne, Edgar Allan Poe, Howard Phillips Lovecraft, Shirley Jackson and Stephen King. Key terminology related to the horror genre (including horror films) will be covered, and during our analysis of the assigned readings, we will apply various critical approaches (psychological, feminist), and examine how these works reflect the fears and anxieties of their times. We will also tackle the difficult question of the attraction and pleasure of horror, the only genre named for its effect on the reader. |

| <b>Module Aims</b>    | <p>The course aims at providing language training in oral presentation skills in English, thus helping the participants to deliver their messages and reach the intended effect of their communication more easily.</p> <p>The classes set out to offer practice opportunities for the participants to gain confidence in speaking in front of others. Another goal is to improve the students’ speaking techniques and their accurate language usage.</p>                                                                                                                                            |
| <b>Module Subject</b> | <p>The course focuses on various types (or genres) of oral presentations. The students become familiar with the general structure, purpose and mode of delivery of various oral presentations. Useful language structures are introduced and practiced, and the importance of accurate language usage is addressed. However, more emphasis is laid on achieving the goal of communication and getting across the intended message. Effective delivery through improved presentation techniques is discussed in theory and ample opportunity is provided for giving actual presentations in class.</p> |

| Termin                | both                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Module Aims</b>    | <p>The course aims at providing language training in English pronunciation. As the most common cause of language-related communication breakdown in international settings is poor pronunciation, the main objective is to raise students’ awareness to the importance of consciously improving their own English pronunciation. The classes of the first half of the term aim at improving how students produce the sounds of English and the rhythm of words, while the second half of the term is devoted to connected speech.</p>    |
| <b>Module Subject</b> | <p>The course starts with identifying pronunciation difficulties for speakers with different first language backgrounds and evaluation the students’ individual strengths and weaknesses. After having discussed the basics of the human articulatory system and the physiology of speech production, we are to discover in practice how the individual sounds are produced. Clear and easy-to-follow instructions are provided on the manner and place of articulation and voicing is practiced in case of individual difficulties.</p> |

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | Following the discussion and practice of sounds, the concept of syllables is introduced with explanations on the features of strong and weak syllables and how they create the rhythm of the English language. The characteristics of word stress in English is contrasted with the main stress patterns and rules of the first languages of the participating students.<br>Characteristics of connected speech are introduced through short stories told in monologue and everyday conversations. Special attention is given to linking and to the natural rhythm of spoken English. |

| <b>Module Aims</b>    | The aim of the course is to master the lexical and grammatical characteristics of special English language for art, its vocabulary and use. The material to be processed increases students' knowledge of art and improves their skills of understanding the visual culture and contemporary art. The exercises lead students through detailed analyses of artworks and teach them to examine works of art from several angles: formal analysis, media, history and themes. The course develops special language skills needed to study art. |
| <b>Module Subject</b> | Topics: 1. Fine art and graphic art. The visual world. Art and creativity. The power and value of art. 2. Line, shape, and the principle of contrast. Form, volume, mass, and texture. Implied depth: value and space. Colour. Time and motion. Unity, variety and balance. Scale and proportion. Emphasis and focal point. Pattern and rhythm. Content and analysis. 3. Media and Process: Drawing. Painting. Printmaking. Sculpture. Photography. 4. History and Context                                                                   |
| Number of Credits     | 4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Module Aims</b>       | Цель курса - повысить уровень самосознания участников через специальные занятия народными сказками. Курс сказкотерапии на русском языке знакомит студентов с местом и значением сказок – в частности венгерских народных сказок, имеющих необыкновенно богатые традиции и удивительно многочисленных и разнообразных – в культурном наследии человечества. Рассматривается знаковая система произведений народного творчества, а затем даётся обзор истории сбора и интерпретации сказок. Сопоставляются аспекты немецкого психоаналитического, русского структурного и венгерского органического подходов.                                            |
| <b>Module Subject</b>    | Космические и общечеловеческие символы в народных сказках; Истина в народных сказках – сказки, как основа работы терапевта; Сказкотерапия на практике – герои и их функции;<br>Жизненные ситуации – решение конфликтов с помощью сказочных испытаний;<br>История исследования сказок, подходы и методы – позитивистическая, структуралистическая, семантическая, психологическая и органическая школы;<br>Образное единство отраслей народного творчества;<br>Пространственно-временные рамки народных сказок;<br>Композиционные принципы и приёмы органического восприятия;<br>Значение астрально-мифических (общечеловеческих и христианских) рамок. |

| <b>Module Aims</b>       | <p>Communication plays a major role in achieving all of our goals. The course of English language development with games and exercises aims to give methodological help in foreign language learning and teaching through games. In this seminar students get to know several communication games that can be used in foreign language development, particularly in speech development. Students meet a lot of types of communication tasks and challenges in the seminar. These exercises increase not only language awareness and competencies, literacy, grammatical and pragmatical knowledge in a second language, but memory, listening, concentration, strategic thinking, team work and social skills as well.</p> <p>The communication activities in the seminar are designed to help students become more prepared how to deal effectively with the many types of communications challenges in every day life. Each activity is designed to help participants better understand some facet of communications and gain expertise in that communication skill or competency. Every student has to teach at least three communication games during the seminar to the members of the seminar group.</p> |

| <b>Termin</b>         | 1st                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Module Aims</b>    | The main aims of the course are to achieve a thorough understanding and to provide a critical evaluation of the key concepts and theoretical approaches that have developed and are developing in the field of environmental history; to gain a comprehensive understanding of the fundamental themes in the environmental history of the region, subjected to a critical and comparative analysis; and to place Central, South-Eastern and Eastern Europe in a European and global context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Module Subject</b> | <p>Environmental history is an interdisciplinary that analyzes interactions between human beings, societies and their physical environment. Environmental history was born in the 1960's, when ecological thinking appeared in the context of historical research.</p> <p>In the first thematic unit of this course the conceptual and theoretical framework of environmental history is defined, followed by the introduction of the special research techniques of this interdisciplinary. One of the key notions of environmental history is the concept historical ecosystem, which can be defined as a subsistence system which exists in one locality, but the spatial dimension of an ecosystem is very flexible, and may range from a pond to the whole universe. In addition to the concept of an ecosystem, the concepts biological, social and cultural evolution, ecological crisis and transformation are also defined.</p> <p>In the second thematic unit the great crises and transformations of historical ecosystems during the traditional and modern times are analyzed. A series of case-studies will be discussed from the period starting with the formation of traditional societies to the invention of agriculture. Classical examples of traditional ecosystems include the early civilizations of Mesopotamia, Egypt, China and the Indus civilization. After laying the foundations, more than half of the course time will be devoted to the discussion of the environmental history of the last two thousand years. We analyze the historical ecosystems of Europe, Asia and the American civilizations during the Middle Ages. The great civilizations of the world became connected after the geographical discoveries of the 15th century. This interconnectedness and the formation of a world system fundamentally reformed the economic and ecological power relations of the world. Civilizations began to use their plants, weeds and animals and unified their landscapes according to European standards. The next focal point of the course is the development, process and the consequences of the Industrial Revolution. The Industrial Revolution re-defined the role of mankind in the process of evolution. In the 20th century human activity reached the dimension of geological forces such as volcanoes, earthquakes and cyclones. The global scale of environmental changes, pollution and global warming has fundamentally influenced the evolutionary perspective of humankind.</p> <p>During the course we discuss topics in a synthetic manner and from a comparative historical point of view and special attention is devoted to the environmental and ecological problems of Central, South-Eastern and Eastern Europe.</p> |

| <b>Module Aims</b>    | The main goals of course are a thorough understanding and critical evaluation of key concepts and theoretical approaches that have developed and are developing in the social and economic history; a comprehensive understanding of fundamental themes in the social and economic history of the region, subjected to critical and comparative analysis; the placing of Central, South-eastern and Eastern Europe in European and global perspectives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Module Subject</b> | <p>In the course we examine the origin and development of the world economy system and modern society. The roots of the world economy can be traced back until the 12th century, when the European economy began to emerge. By the late Middle Ages the first European economic integration took shape around Venice. For a period, Antwerp played a leading role in European economy, followed by Genoa, Amsterdam and London. The regions around these cities became centres of the European economy and were surrounded by extended half peripheries and peripheries. The European economy initiated economic integration in global scale according to its own norms, as a result of the great geographical discoveries and colonisation. The leading city states were replaced by nation states, which were able to mobilize more resources. Amsterdam, the United Provinces, London and Great Britain became border(-land) regions.</p> <p>The roots of modern European societies can be traced back until the late Middle Ages. The transformation of European societies was attached to the establishment and development of economic integration and disintegration. The necessity for economic and political integration emerged from the multilayer crisis of the 14th century. It is necessary to define all of institutions of European society during early modern times, together with the place and function of social groups.</p> <p>The main aims of the course are to achieve a thorough understanding and to provide a critical evaluation of the key concepts and theoretical approaches in social and economic history; to gain a comprehensive understanding of the fundamental themes in the social and economic history of the region, subjected to critical and comparative analysis; to place Central, Southeastern and Eastern Europe into a European and global context.</p> <p>During the course students will develop the ability to formulate, investigate and discuss historically informed questions from a comparative and interdisciplinary perspective. Students will be able to identify and work with primary secondary sources of historical study. Students will have the opportunity to become familiar with the design and use of historical research strategies and techniques in a critical and reflexive manner.</p> <p>Special attention will be paid to develop students' ability to employ higher order-thinking skills such as analysis, synthesis and evaluation. Students will be able to locate, synthesize and critically evaluate literature relevant to the research topic, and to efficiently integrate theories, primary and secondary data. Students will have the opportunity to learn how to synthesize information in order</p> |

| <b>Module Aims</b>    | <p>The course is designed to lead you through a progressive sequence of thoughts needed to cover the main lines of approach to all the important aspects of starting and running a small business. This course should help to make you aware of what there is to do and why you should consider doing it in an enterprise.</p> <p>You will study how to make a business plan and understand and analyze the financial statements and annual report.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Module Subject</b> | <p>This course will review the origins and development of business, and explain fundamental concepts and the business system. You learn about some important management considerations and how to win in business. It will give you a better understanding of the people skills that will lead you to success. You will learn about the important ways in which management contributes to the success of business and some of the essential methods and tools managers use to increase their own productivity, as well as that of the business.</p> <p>The various aspects covered are not parcelled up into formal subjects. It avoids going everything in detail so as not to be overcomplicated.</p> <p>Your careful study of this course should give you a good knowledge of how to plan, solve problems, make good decisions, maintain control over your business, and expand it into new markets.</p> <p>You will find much of this material important to understand, and you will realize how elemental it is to master these business tools for managerial effectiveness.</p> <p>So whatever stage you have reached in, say, you will probably find something of use in these units.</p> <p>If there are areas you either do not quite understand or think particularly important to you, you should take advantage of some text from the suggested reading list.</p> <p>When you complete this course, you will be able to:</p> <ul style="list-style-type: none"> <li>• Describe the business system and how maintaining focus, encouraging productivity, and implementing change are important to managing business,</li> <li>• Discuss the importance of planning and the planning steps managers take,</li> <li>• Identify the key elements involved in solving problems,</li> <li>• Define the advantages of risk taking,</li> <li>• Explain the importance of self motivation and the ability to motivate others,</li> <li>• Describe how good management decisions are made.</li> </ul> |

| <b>Termin</b>            | Présentation ou essai                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>ModuleAims</b>        | Il sera question d'étudier les facteurs de ce changement dans son contexte historique et une attention particulière sera accordée à l'analyse de la formation des partis politiques hongrois, des élections et du fonctionnement du système parlementaire. A la fin de cet enseignement, l'adhésion à l'Union européenne sera également abordée. L'enseignement est essentiellement proposé aux étudiants qui s'intéressent à l'histoire, la science politique et la civilisation. |
| <b>ModuleSubject</b>     | L'enseignement part de la représentation du régime communiste Kádár pris le pouvoir après la chute de la Révolution de 56. Il analyse les différents aspects du changement de régime en Europe centrale, en particulier en Hongrie. Pour terminer, la formation de l'État de droit, l'installation et le fonctionnement du système démocratique seront également étudiés en vue de l'examen de la politique actuelle.                                                              |

| <b>Module Aims</b>       | The aim of the course is to make students familiar with the basic notions, principles, notation and tools of algorithm theory, and enable them to program basic algorithms using a high level programming language.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Module Aims</b>       | This course introduces the students to the basic knowledge of graph theory. Beside the theoretical backgrounds we show some practical problems where the theoretical results can help to solve these problems.                                                                                                              |
| <b>Module Subject</b>    | Introduction Fundamentals and Elementary Results: In this section we introduce those of definitions which one needs to understand the most important basic connections in the graph theory. The Structure of Graphs Connectivity Hamiltonian Graphs Euler Graphs Planar Graphs Electrical networks Matching Graph colouring |

| <b>Module Aims</b> | Data mining is a broad area that integrates techniques from several fields including machine learning, statistics, artificial intelligence, and database systems, for the analysis of large volumes of data. This interdisciplinary course gives a wide exposition of these techniques. The |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                          | course is recommended for students in Informatics, Engineering, Natural sciences or Economics.                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Module Subject</b>    | 1. Introduction to Data Mining 2. Machine Learning and Classification 3. Input: Concepts, instances, attributes 4. Output: Knowledge Representation 5. Classification: Basic methods and decision trees 6. Evaluation and Credibility 7. Data Preparation for Knowledge Discovery 8. Clustering 9. Associations 10. Visualization 11. Graph mining and social network analysis 12. Mining Object, Spatial, Multimedia, Text and Web Data 13. Applications and Trends in Data Mining 14. Data Mining Software Tools |

| <b>Module Aims</b>       | The aim of the course is to cover the basics of management focusing on educational organizations (schools, higher education institutions) and cultural organizations (theatres, museums, cultural centers, libraries etc.).                                                                                                                                                                                                                                                                                                       |
| <b>Module Subject</b>    | The course deals with the 4 management functions -- planning, organizing, leading and control -- in educational and cultural organizations. We cover strategic planning, organizational structures, human resources management, leadership styles, leadership functions (motivating, communicating, leading groups) and controlling the organization. When studying these functions we emphasize the special characteristics of educational and cultural organizations and what management challenges these characteristics mean. |

| <b>Module Aims</b>       | The goals of the course is to understand and perceive the importance of the visual arts in religious cultures, especially in medieval Christianity and to study the main eras and art styles of the Middle Ages.                                                                                                                                                                                                                                                                                     |
| <b>Module Subject</b>    | In this course, students learn about basic concepts of iconography, iconology, and they are introduced into the analysis of iconographic themes. Through visual presentation, students can identify the main art styles and iconographic themes of the eras of Middle Ages. They understand the connection between artwork and the intention of the Church, to transmit the teachings of religious ideology. The course include rich pictures representation prepared with Power Point and handouts. |

| <b>Module Aims</b>       | The module aims to provide a broad understanding of music history between 1750 and 1850 and aims to develop intellectual and emotional abilities of students and to form and enrich their musical taste. The module explores how history, literature and other art forms influenced the development of the music.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Module Subject</b>    | The course covers the life and works of great composers from about 1750 to 1850. Among others, the module discusses Haydn, Mozart, Beethoven, Schubert, Schumann, Mendelssohn. Importance is given to instrumental music sonata, trio, string quartet, symphony, concerto, serenade and divertimento. The course focuses on operas from Haydn/Esterházy court through Mozart's Da Ponte operas and Die Zauberflöte to Beethoven's Fidelio. The meaning of German Lied by Schubert, Schumann, Mendelssohn is also discussed. Schumann's piano music plays important role in this module. During the semester each student has to make a ten minutes long oral presentation. Two tests are required to written and at the end of the semester students have to pass an oral examination. |

| <b>Module Aims</b>       | The module aims to introduce basic musical terminology (Italian, German, English, Latin) in music theory and performing practice. It contributes to the correct reading of music scores and to better understanding composers' exact intends and instructions.                                                                                                                                                                                                                                                                                                       |
| <b>Module Subject</b>    | The module goes through the musical terminology based on the Italian, German, French and Latin languages (also pronunciation) common used in music theory and performing practice. The course provides help in understanding music scores from the middle age to the 21st Century. Musical terms are demonstrated by audio exemplars. The module also focuses on the new English language based musical terminology. Students are required to make translations to their mother's tongue from foreign music reviews. During the semester one test has to be written. |

| Module Aims       | The aim of the course is to teach would-be conductors and teachers the necessary theoretical issues and practical skills which are essential in conducting a school community (group, class, choir) in a professional way. Students have to be familiar with the pieces of national and international composers written for children's choirs, and the methods of teaching, the technical requirements of conducting and the traditions of performing them. Participation in conferences and courses of the national and international professional associations. Changing experience with conducting teachers of other colleges, and international partner institutes. Inviting internationally renowned conductors for courses. |
| Module Subject    | Hungarian children's and youth choir pieces, following the difficulty of conducting techniques. Erkel Ferenc–Kölcsey Ferenc: Himnusz and Egressy Béni–Vörösmarty Mihály: Szózat. Extracts from the European choir pieces corresponding to the difficulty of pieces present in elementary school textbooks. The backbone of the course is common singing, learning and practicing technical elements necessary for musical exercises and typical situations of music making. The course also deals with different choir conducting methodological elements, score reading and with different tools that help would-be teachers in learning and teaching choir pieces.                                                              |
| Number of Credits | 4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|                       | Hungarian language with English summary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Termin                | Both                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Module Aims</b>    | Features of different styles and eras of European music – familiarization with those features through examining music generally and examining specific pieces of music, complemented with practical exercises. Learning skills to analyze music necessary for pedagogical purposes, with regards to different pieces of music from different eras.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Module Subject</b> | Physical attributes and components of the musical sound. Overtone system. Scales and keynotes. Sound systems. Quints. Authentic and plagal steps and functions. Chords. Elements and definitions of rhythm. Characteristics of beats. Problems of contemporary notations. Elements and definitions of tune. Types of figuration. Aspects of analysing final chords. Definition of everyday musical terminology. Main genres of early Christian and Gregorian music. Gregorian keynotes. The hexachord-system and tonic solva according to Guido of Arezzo. Gregorian notation, and sheet reading guidelines. Early forms and theoretical definitions of medieval polyphony. Rules of organum construction. The characteristic genres and techniques of the Notre Dame school and Ars Antiqua. The music and composition techniques of Ars Nova and trecento. Characteristics, organizing theories and consonance of the renaissance vocal polyphony. Baroque music theory. Stylistic and genre novelties of the Baroque, the beginning of Baroque. Instrumental and vocal Baroque genres and forms (chorals, variations, preludes, fugues, inventions, suites, sonatas, rondeaus, oratorios, concertos, passions, etc). Late Baroque and early Classic genres and masterpieces (eg: D. Scarlatti, C. Ph. E. Bach). Consonance and form in the music of J. Haydn, W.A. Mozart, L.v. Beethoven (sonatas, variations, symphonies, concertos, etc.) Enlargement of consonance elements of the Baroque and Vienna Classic music in the 19th century (minor subdominants, Naples phenomena, chords, romantic sequences, etc). New consonance and tunes in Romanticism, folkloric effects, neomodality, specific scales, minore-maggiore, distance-governed modulations, enharmonic variations, chromatic scales, polar connections, function mixing, quint and quart building with a special regard on Liszt's music. Dissolution of tonality at the turn of the century. New melodies and harmonies at the beginning of the century. Beginning of atonality. 20th century composition techniques from a theoretical perspective. Analysis is mainly targeted at internationally recognized composers, with a special regard to Bartók's pieces. |
| Number of Credits     | 4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                   | <p>Elements and definitions of tune. Types of figuration. Aspects of analysing final chords. Definition of everyday musical terminology. Main genres of early Christian and Gregorian music. Gregorian keynotes. The hexachord-system and tonic solfa according to Guido of Arezzo. Gregorian notation, and sheet reading guidelines. Early forms and theoretical definitions of medieval polyphony. Rules of organum construction. The characteristic genres and techniques of the Notre Dame school and Ars Antiqua. The music and composition techniques of Ars Nova and trecento. Characteristics, organizing theories and consonance of the renaissance vocal polyphony. Baroque music theory. Stylistic and genre novelties of the Baroque, the beginning of Baroque. Instrumental and vocal Baroque genres and forms (chorals, variations, preludes, fugues, inventions, suites, sonatas, rondeaus, oratorios, concertos, passions, etc). Late Baroque and early Classic genres and masterpieces (eg: D. Scarlatti, C. Ph. E. Bach). Consonance and form in the music of J. Haydn, W.A. Mozart, L.v. Beethoven (sonatas, variations, symphonies, concertos, etc.) Enlargement of consonance elements of the Baroque and Vienna Classic music in the 19th century (minor subdominants, Naples phenomena, chords, romantic sequences, etc). New consonance and tunes in Romanticism, folkloric effects, neomodality, specific scales, minore-maggiore, distance-governed modulations, enharmonic variations, chromatic scales, polar connections, function mixing, quint and quart building with a special regard on Liszt's music. Dissolution of tonality at the turn of the century. New melodies and harmonies at the beginning of the century. Beginning of atonality. 20th century composition techniques from a theoretical perspective. Analysis is mainly targeted at internationally recognized composers, with a special regard to Bartók's pieces.</p> |

|                       | Previous musical experience and at least 2 students are required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Termin</b>         | Both                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Module Aims</b>    | The basic aim of the module is to use students' instrumental skills in music literature other than their solo repertoire as chamber music requires a number of skills not normally required for the performance of solo music. The module focuses on group work as a basic element of music productions.                                                                                                                                                                                                                                      |
| <b>Module Subject</b> | Teamwork means cooperating, especially playing in instrumental groups like orchestra or other chamber music formations. It is a part of our everyday life in both of teaching and performing. The module will be focusing on chamber music aspects offered by various range of compositions. To give the priority to important sections with staying secondary by others is the goal of chamber music approach. Chamber music is not restricted only to concert hall and opera stages but also has to be presented in the field of education. |

|                       | Previous musical experience is required, if the student does not an Erasmus - student of the JGYPK Music Education Department.                                                                                                                                                                                                                                                                                                                                              |
| Termin                | both                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Module Aims</b>    | The aims of the voice training-lessons are to improve the voice of the students technically and musically as well. To learn different works in different styles, focusing in the works of hungarian composers. Preparing to competitions, concerts and exams. The students can get a 30 minutes individually lesson every week. On this lesson he/she show the works he/she have practiced, and the teacher correct it. The student sings prima vista as well some lessons. |
| <b>Module Subject</b> | Works of Béla Bartók, Zoltán Kodály, Ferenc Liszt and Hungarian contemporary composers. Works of different epochs of the world-musical literature.                                                                                                                                                                                                                                                                                                                          |

| <b>Module Aims</b>    | The aim of the course is to familiarize students with the Hungarian composers e.g. Béla Bartók. Students will acquaint themselves with their most important works. They have to visit concerts, recitals and opera performances and write reports what about they have seen and listen to. At least 10 different events, included the concert evenings of our department. |
| <b>Module Subject</b> | Works of Béla Bartók, Zoltán Kodály, Ferenc Liszt and Hungarian contemporary composers. Works of different epochs of the world-musical literature.                                                                                                                                                                                                                        |

| Termin             | both                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Module Aims</b> | The aim of the course is to learn the advanced features of graphic design. Understanding terms: bitmap and vector-based based image processing, montage techniques, typography, 3D, etc.). Important value of the course is to try to create an artwork, which goes beyond the technique, it's philosophy is also a high standard. Another goal is the acquisition of technical implementation. |

|                          |                                                                                                                                                                                   |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | The course also aims to improve the intuition and contemporary creative design awareness and also the sensitivity and cooperation of the individual and group studio design work. |
| <b>Module Subject</b>    | A continuing examination of elements of design, spatial relation relationships, typography and imagery as they apply to practical visual solutions for various applications.      |
| <b>Number of Credits</b> | 4                                                                                                                                                                                 |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Module Aims</b>       | The aim of the course is to learn the basic steps of motion picture design, both theoretical and practical elements, such as: usage of the camcorder and film editing and compositing software. Students learn the basic terms of motion picture, learn to use the camcorder and basic principles of animation. Another goal is the acquisition of technical implementation. The course also aims to improve the intuition and contemporary creative design awareness and also the sensitivity and cooperation of the individual and group studio design work. |
| <b>Module Subject</b>    | Completing two tasks: creating a video installation and 2D digital animation with After Effects software.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Module Aims</b> | The course is designed to learn and practice the way of thinking in two dimensions with the help of analysing a living model and his environment. At the end of the course the student should be able to create a two-dimensional surface using simplified and abstract forms, varying compositions, corresponding architectural flat glass art.<br>A kurzus célja elsajátítani, gyakoroltatni a síkra redukált komponálási módot élő modell és mesterséges környezet kapcsolatának analizálásával. A kurzus végén legyen képes a hallgató a formák egyszerűsítésével, újértelmezésével kompozíciók variálásával síkdekoratív felületet létrehozni, elsősorban építészeti síküveg anyagszerűségében gondolkodva. |

| <b>Module Aims</b> | The course is designed to learn and practice the way of thinking in two dimensions with the help of narrow and wide artificial and natural environment by analysing the relationship between a part and the whole. At the end of the course the student should be able to create a two-dimensional surface using simplified and abstract forms, varying compositions, corresponding architectural flat glass art. |

|                          |                                                                                                                                                                                                                                                                                                                                                                                               |

|                          | A kurzus célja elsajátíttatni, gyakoroltatni a síkra redukált komponálási módot szűkebb és tágabb mesterséges természeti környezet, rész és egész kapcsolatának analizálásával. A kurzus végén legyen képes a hallgató a formák egyszerűsítésével, újértelmezésével, kompozíciók variálásával síkdekoratív felületet létrehozni, elsősorban építészeti síkúveg anyagszerűségében gondolkodva. |
| <b>Module Subject</b>    | The relationship of two and three dimensions using reduced, decorative compositional method. Redefining narrow and wide spaces using variable means with the flat glass design aspects.<br>Sík és tér kapcsolata a leegyszerűsített, dekoratív komponáláskor. Szűkebb és tágabb terek újrafogalmazása változó eszközökkel a síkúveg tervezési szempontjait szem előtt tartva.                 |
| <b>Number of Credits</b> | 4                                                                                                                                                                                                                                                                                                                                                                                             |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Module Aims</b>       | During the practice students learn some basic knowledge of three-dimensional design, and they also get some experience on how to work with some different kinds of materials (such as paper, clay, wood, wire, plaster, Styrofoam, etc.) Students have the possibility to construct and create some 3D sculptural forms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Module Subject</b>    | Participants of the course are going to make some research on some “natural forms” and will get some experience and practical knowledge on some basic concepts of sculptural tasks, such as shape, construction, scale, size and proportion. During the term students will have the possibility to choose their own “natural forms” (such as crops, insect cocoons, minerals, etc.), to carry out some research about its shape, proportion and studying its structure they will create some sketches, 3D models and some sculptural objects and constructions as well. We would focus on the most important and fundamental sculptural and spatial issues (shape, construction, scale, size and proportion, structure). During the research process, we do not only focus on the visual content, but put emphasis on other senses, such as tactility etc. These practices will help to develop the students’ way of thinking in creating three dimensional forms and spatial constructions. |

| <b>Module Aims</b> | The course aim is to help the students to develop their way of thinking and creating 3D forms and spatial constructions. We carry out some research and focus on the most fundamental sculptural and spatial issues (shape, construction, scale, size and proportion, structure). Another important |

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                       | aspect is that students should be able to use this knowledge in the field of visual education and also in their own art- and teaching practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Module Subject</b> | <p>This course develops the students' sculptural and spatial knowledge based on the topics they have already learnt at 3D Studies I. course, such as proportion, scale, material, forms and construction, forms and spatial relations. We focus on the design and modelling process, but some best concepts and design pieces will be carried out. Realization of their original concepts in material is always a significant motivation for the students and provides even more opportunity to gain experience during the working process. The variety of tasks aims that students could learn the main aspects in the three-dimensional way of expression.</p> <p>During the practical work students gather further experience on the use of different kind of materials and also the significance of its formative role. The course involves some basic research on the relationship between structure and form, studying shapes and the diversity of texture and structure, creation of different spatial arrangements and sculptures, construction and modelling of spatial geometric systems, preparation of their visual presentation and design documentation.</p> |

| <b>Module Aims</b>    | <p>The course is designed to develop figure drawing, to help in finding and practicing the genre, the proportions and movements. A quick visual perception, grasping and visualization can help in the development of figure drawing.</p> <p>A kurzus célja az alakrajz fejlesztése, a karakter, az arányok, mozdulatok helyes megtalálása és gyakorlása. A látvány gyors felfogása, megragadása és vizualizálása nagyban segít az alakrajz fejlesztésében.</p>                                                                              |
| <b>Module Subject</b> | <p>Drawing after a model with short, 3-5 minutes settings. Trying different drawing tools (charcoal, pencil, ballpoint pen, marker, chalk, ink, watercolour), using multiply techniques within a drawing. All drawing tools should always be taken with to the practices.</p> <p>Modell utáni rajzolás, 3-5 perces rövid beállításokkal. Különböző rajzeszközök kipróbálása (szén, ceruza, golyóstoll, filctoll, kréta, tus, akvarell), többféle technika alkalmazása egy rajzon belül. Az órákra mindig minden eszközt hozni szükséges.</p> |

| <b>Module Aims</b>    | <p>The course is designed to develop the figure drawing by using a quick drawing technique to get a quick visual grasp, a quick interpretation. Our aim is not the creation of a detailed drawing, but we expect the students to find their own way for drawing expression. We use the following drawing techniques: reduction, highlighting, sketch, drawing multiple forms on a single piece of paper, etc.</p> <p>A kurzus célja az alakrajzolás fejlesztése, gyors rajzolással a látvány megragadása, gyors értelmezése. Nem kidolgozott rajz készítése a cél, hanem saját rajzi kifejezés megtalálása. Ehhez a következő rajzolási módok nyújtanak segítséget: redukálás, kiemelés, vázlagszerűség, egy papírra több alak rajzolása, stb.</p> |
| <b>Module Subject</b> | <p>This course involves drawing after a model with short, 3-5 minutes settings. It makes possible to try a variety of drawing tools (charcoal, watercolour, pencil, various pastels, ink, collage preparation, etc.). It is important not to use the usual favourite tools, but experiment with some unknown accessories, technics as well.</p> <p>A kurzus 3-5 perces gyors modell utáni rajzolást jelent, ami a legkülönbözőbb eszközökkel való rajzolás kipróbálását is jelenti egyben (szén, akvarell, ceruza, különböző kréták, tus, kollázs készítése, stb.). Fontos, hogy ne a már megszokott, kedvenc eszközöket használjuk, hanem az ismeretlen technikákkal is kísérletezzünk.</p>                                                       |

| <b>Module Aims</b>       | <p>During the course students will get to know some basic knowledge of three-dimensional way of thinking, and they also get some experience how to work and build up forms with clay. Students have the possibility to construct and create some basic 3D sculptural forms. We would focus on the most important and fundamental sculptural and spatial issues. They are going to make some research on some “natural forms” and will get some experience and practical knowledge on some basic concepts of sculptural tasks, such as shape, construction, scale, size and proportion. During the term students will have the possibility to carry out some research about some “natural forms, studying shape, proportion and structure, and they will create some sketches and they would mould the chosen form using natural models and clay materials.</p> <p>A tantárgy célja a téri-, plasztikai megjelenítés alapjainak elsajátítása, a plasztikai alapfogalmak: arány, lépték, anyaghasználat, tér és forma kapcsolata, forma és szerkezet összefüggéseinek kutatása. A kurzus célja a háromdimenziós ábrázolási rendszer alapfogalmaira, technikáira és azon belül kifejezetten a mintázásra, mint szobrászati módszerre fókuszál, hogy ez által mélyebb, komplexebb szaktudást biztosítson a hallgatók számára. A térlátás, térben gondolkodás, formák és a kreativitás kibontakoztatása és továbbfejlesztése, a hallgatók plasztikai ábrázolás kifejezésbéli formakészletének gazdagítása a cél.</p> |
| <b>Module Subject</b>    | <p>They have to make some research on some “natural forms” and will get some experience and practical knowledge on some basic concepts of sculptural tasks, such as shape, construction, scale, size and proportion. They will create some sketches and they would mould the chosen form using natural models and clay materials. They would learn some basic sculptural reproduction technics for example plaster casting, etc.</p> <p>Természeti formából kiindulva tanulmányok, stúdiumok rajzolása, majd ezt követően mintázása – plasztikai alapfogalmak: arány, lépték, forma és szerkezet tanulmányozása – mintázási alaptechnikák megismerése, elsajátítása. Gipszöntési, szobrászati sokszorosítási alaptechnikák megismerése és gyakorlatban történő alkalmazása.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Module Aims</b>       | Schwierigkeiten beim Fremdsprachenlernen werden oft durch die Muttersprache verursacht, genauso wie auch viele Fehler als Interferenzfehler zu betrachten sind. Die Erschließung der Divergenzen zwischen der Muttersprache und der Fremdsprache soll dazu beitragen, Lernschwierigkeiten abzubauen. Der Kurs will die Herausbildung einer bewussten Sprachbetrachtung fördern.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Module Subject</b>    | Thematik: 1) In der Einführung wird auf Möglichkeiten der Klassifizierung der Sprachen, vor allem auf die Klassifizierung nach dem formalen Aufbau, d. h. auf die Sprachtypen eingegangen. 2) Als Ausgangssprache dient das Deutsche, wobei zuerst Bereiche aus der Morphologie herausgegriffen werden (z. B. die Genusproblematik bei Substantiven, Personal- und Possessivpronomina; Möglichkeiten der Pluralbildung von Substantiven; Deklination der Adjektive in unterschiedlichen Satzgliedfunktionen; die Konjugation und das Tempussystem, Perfektbildung mit haben und sein; Bildung und Verwendung der Numeralia usw.). 3) Des Weiteren werden ausgewählte typische Interferenzfehler thematisiert (z. B. Fehler bei der Negation, beim nominalen Prädikat und vor allem valenzbedingte Fehler). 4) Im Bereich der Lexik wird wiederum vom Deutschen ausgegangen: Es werden Teile des lexikalischen Bestandes ausgewählter Sprachen miteinander kontrastiert, welche die Äquivalenztypen Eins-zu-viele-Entsprechung, Viele-zu-eins-Entsprechung, Eins-zu-Teil-Entsprechung belegen. Die Eins-zu-Null-Entsprechung wird ausführlich behandelt, da die Realien auch aus übersetzungstheoretischer und -praktischer Sicht große Relevanz haben. Als Material werden auch literarische Texte eingesetzt. |

| <b>Module Aims</b> | Es wird davon ausgegangen, dass Phraseologismen einen relevanten Teil des lexikalischen Bestandes darstellen: Die Kenntnis der festen Wortverbindungen ist für das Beherrschen einer Sprache unumgänglich. Bei der Vermittlung von Phraseologismen im Sprachunterricht tauchen zwei grundlegende Fragen auf: Erstens welche Phraseologismen, zweitens wie sollten diese vermittelt werden? Bei der Auswahl gilt als oberstes Prinzip die funktional-kommunikative Relevanz: Bei den Sprichwörtern soll die Vermittlung des parömiologischen Minimums des Deutschen im Mittelpunkt stehen, im Kontrast zum Ungarischen und zum Slowakischen. Bei der methodisch-didaktischen Darbietung soll einerseits die Kontrastivität, andererseits die |

|                          | Einbettung in sprachliche Kontexte verfolgt werden. Die textstrukturierende Funktion der Phraseologismen wird in unterschiedlichen Textsorten untersucht, genauer in Werbetexten und in Sprachwitzten. Auf Grund von literarischen Texten wird auf die Problematik der Übersetzbarkeit eingegangen. Den kultur- und sprachenspezifischen Phraseologismen, d. h. den Realien-Phraseologismen wird besondere Aufmerksamkeit geschenkt.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Module Subject</b>    | 1. Theoretische Grundlagen zur Phraseologie • Gegenstand und Aufgaben der Phraseologie als sprachwissenschaftlicher Disziplin • Abgrenzung der Phraseologismen von den freien Wortverbindungen (Tests) • Phraseologismen im engeren und im weiteren Sinne – gemeinsame Merkmale der Phraseologismen 2. Klassifikation der Phraseologismen I: • Referentielle Phraseologismen: ♣ Nominative Phraseologismen (Idiome, Teil-Idiome und Kollokationen) ♣ Propositionale Phraseologismen (feste Phrasen und topische Formeln) 3. Klassifikation der Phraseologismen II: • Strukturelle Phraseologismen • Kommunikative Phraseologismen (Routineformeln) 4. Kontrastive Phraseologie I.: • Theoretische Grundlagen zur kontrastiven Phraseologie: ♣ Die Vergleichsbasis (tertium comparationis) ♣ Vergleich auf der semantischen Ebene ♣ Vergleich auf der formalen Ebene (Bildspenderbereich, Komponentenzahl und morphologische Charakteristika) ♣ Vergleich auf der stilistischen Ebene 5. Äquivalenztypen • Phraseologische Entsprechung (weitgehende Äquivalenz, partielle Äquivalenz und funktionale Bedeutungsäquivalenz) • Lexikalische Entsprechung • Nulläquivalenz • Pseudoäquivalenz (zwischen sprachliche Homonymie und Enantiosemie) 6. Sprichwörter I: • Das parömisches Minimum des Deutschen im Kontrast zum Ungarischen und zu anderen Sprachen 7. Sprichwörter II: • Die Bekanntheit des deutschen parömisches Minimums unter ausländischen GermanistikstudentInnen – Interferenzerscheinungen 8. Sprichwörter III: • Die Sprichwörter unter pragmatischem Aspekt: die Stellung der Sprichwörter in der heutigen Sprachverwendung – Persiflagen, Parodien, Anti-Sprichwörter, Wellerismen 9. Phraseologismen im Text I: • Phraseologismen als textstrukturierende Elemente in Werbetexten 10. Phraseologismen im Text II: • Phraseologismen als textstrukturierende Elemente in Sprachwitzten 11. Phraseologismen im Text III: • Die Übersetzungsrelevanz der Phraseologismen: ♣ die quantitative Relevanz ♣ die qualitative Relevanz: die stilistische Relevanz, die pragmatische Relevanz und die textlinguistische Relevanz 12. Zur Übersetzungsproblematik der textkonstitutiven Phraseologismen in literarischen Texten 13. Phraseologie und DaF: Phraseologie-Vermittlung als Kulturvermittlung (die Realien-Phraseologismen) |

| Termin                | 2nd                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Module Aims</b>    | Der Kurs bietet einen orientierenden Überblick über die Geschichte der ungarndeutschen Literatur, es werden Tendenzen, Gattungen, bedeutende Oeuvres und Werke dargestellt; es werden analytische Fertigkeiten, analytisches Denken, Kreativität, sowie sprachliche Kompetenzen der Studenten gefördert. Indem der Kurs die Literatur als einen Modus der Identitätskonstruktion fasst, möchte er auch die reflexiven Fähigkeiten der Teilnehmer entwickeln. Die Liste der zu erörternden Werke wird bei jeder Ankündigung des Kurses aktualisiert. |
| <b>Module Subject</b> | Ausführliche Thematik des Kurses: • Die Wende (Koch, Michaelisz) • Nach der Wende (Mikonya, Fischer, Sziebert) • Nach der Wende (Bayer) • Der Ausgesiedelte (Raile) • Erneuerung? (Brenner, Arnold, Szeifert ...) • Das Problem der Sprache in der ungarndeutschen Literatur • In ungarischer Sprache (Kalász) • In ungarischer Sprache (Elmer) • In ungarischer Sprache (Balogh) Ungarndeutsche Kinderliteratur                                                                                                                                    |

| <b>Termin</b>            | Both                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Module Aims</b>       | The course aims are to diversify the history knowledge of the students regarding Hungarian and Romanian history, to make them familiar with the particularities of a multiethnic historical entity as well as with the cultural heritage, traditions and legends of the peoples living in Transylvania.                                                                                                                                                             |
| <b>Module Subject</b>    | The subject of the course consists in presenting the different narratives (Hungarian, Romanian, Saxon) related to the foundation myths and the professional historical analysis of the early medieval history of Transylvania. Going through the entire medieval, modern and contemporary periods, the relevant historical events will be approached of different points of view, as these have been interpreted by contemporary Romanian and Hungarian historians. |

| <b>Termin</b>            | Fall                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Module Aims</b>       | The aim of the course is to develop student's problem solving abilities, critical thinking and creativity. Problem solving can be learned only by solving problems it will be supported by methods and strategies.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Module Subject</b>    | <ul style="list-style-type: none"> <li>• Models of the problem solving process</li> <li>• Strategy: work backward</li> <li>• Strategy: draw a figure</li> <li>• The steps of problem solving process as different roles in a situation</li> <li>• Problems from Harry Potter</li> <li>• Problem bushes – continue with new questions</li> <li>• One model – different texts</li> <li>• Create games from mathematical problems</li> <li>• Guess – proof; critical thinking</li> <li>• Colouring proofs</li> <li>• Pursue parity</li> <li>• Invariance Principle</li> </ul> <p>Creativity – mathematical puzzles</p> |

| Termin                | 1st, 2nd                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Module Aims</b>    | The course will help exploring the world of extreme sports. Wall and rock climbing will widen the recreational knowledge such as working out projects, recommending programme opportunities. Students can also improve their psychological condition. The education is going on 2 languages -hungarian and english.                                                                                        |
| <b>Module Subject</b> | Students will have to organize 2-3 day lasting rock-climbing tours, camps according to given instructions - eg.: choosing location, equipment listing, organizing the camp-life. All students will be able to apply the instructions learned and use that in the real environment. Besides the recreational advantages the psychological-improving opportunity is as also an essential part of the course. |
